Chapter 6 – Great sexual positions for her

Chapter 7 –Great Sexual Positions for him

Chapter 8 – Why dialog is important

Chapter 9 – Keeping your sex life steaming hot

Chapter 10 – Sex and Culture

Conclusion

Introduction

Have you ever felt like your love life was a non-starter? Perhaps you had a great love life in the past but it began to seem mundane. There is so much help out there these days that you really can get your love life back on track with very little effort. Win her heart all over again or win his! This book is a practical manual that is loaded with information that you may not have known. Do you know what women see as sexy? What about your man? The problems happen because there is a very wide gap between the way that women see sex and the way that men do. However, once you understand those differences you can exploit them to give you the best sex ever.

In attempting to break the barriers in a relationship that can stem from an unhappy or unsatisfied sex life, this book goes over some important practices that can be attempted and tried by people from all walks of life. The book talks about not only how to please each other in the bedroom, but how to please one another outside of bedroom to reflect into the bedroom. This book talks about why these actions are important and how they can affect your sexual relationship when they are done correctly and when they are not done at all. Sex is one of the most intimate parts about being in a relationship, having a sex life that is less than ideal can cause a relationship to crumble.

This book also goes over the importance of communication in a relationship. How one can believe they are communicating with the other when they really aren’t. I will guide you through the different myths and stereotypes following different types of practices and show you the importance of opening up your wild side in the bedroom.

Did you also know that your health matters as far as great sex is concerned? We will give you great tips and tricks that you can employ to make your sex life better at any age at all. The way that you approach sex and the way that you treat your body have a lot in common and the care that you put into both activities should be equally caring. We will show you how to care for your body in such a way as to make yourself alluring and also switch that ignition light back on again.

Sometimes it is the mundanity of being with one partner over an extended period of time that can seem to kill off your love life, but in actual fact, it isn't a change in chemicals or anything that is logical. It's a change of point of view. Keep the passion alive by actually sharing that passion because once you do, you will find that you can discuss anything with your partner and expect them to respond.

While many believe sex is simply done with two individuals and nothing else, this book shows you how to spice up a fizzled sex life by the use of different types of sex toys, edibles, anal sex and oral sex. Finding the line between taboo and social norms can be difficult for some individuals. If you feel as though you are categorized as someone who delves into taboo like practices, you will be surprised to know that everyone around the world, culturally, views sex differently than others. You cannot expect cultures that are hundreds of years old to practice social norms in the modern society because as far as the culture is concerned, the time period in regards to sex has not changed.

There is an interesting difference between the way that guys views sex and the way that girls do. We take a look at what turns a man on and what turns a girl on because without knowing those secrets, you may just be pressing the wrong buttons. This book is a handy guide for couples just starting out, for those who have been married for a long time and for those a little nervous about their ability in bed. Believe me, you are not alone. So many people worry about not being able to perform and performance anxiety may

be getting in the way. We explain how to move forward from this and get everything working like it was intended to.

Chapter 1 – What Girls Want in Bed

I started with this because most men actually want to know if they are doing things in the right way and will be concerned about whether their girl is seeing things in the same way as they are. Men are the protectors. They are the ones who are the hunters, and when it comes to sex, many don't have a clue because in their role as provider, they haven't taken the time to find out what women like. We asked over 100 women about their likes and dislikes in the bedroom and this may help you and may also show you what your woman probably wants. When women talk together, they are open and frank about things such as their sex life, though because of their emotional and caring nature and unlikely to criticize their man or try to explain what they are doing wrong because, quite frankly, they don't want to upset him or challenge his masculinity. Thus, unsatisfactory bedroom situations are quite normal without this communication. I am hoping that the answers I got from guys and from girls will help you all to stop fighting each other by refusing to talk about your needs. Communicating your needs in the bedroom is the only way to assure that you will be pleasured the way you desire. The top things that girls said that were missing in their bedroom experience were these:

Number One complaint was that women do not climax enough. Because a man's climax is obvious, he can't get away with faking it. However, the majority of women who were interviewed had faked orgasm several times in order to make their men feel better about sex, but had not actually experienced orgasm while making love. Girls want to come as much as men do, but since men have trouble understanding the female anatomy, it's little wonder that they don't know how to make a woman climax. I think if you are arguing this point, then you need to watch this video. It's actually hilarious and shows how little men know about the delicate parts of a woman. If a man is not aware of the anatomy of a woman, how is he

supposed to find all of those places that give her orgasm? We will cover this later in the book.

Inability to climax is a common problem among women. However, it is not always attributed to the male's lack of knowledge on the female anatomy. Many factors take place in determining if a woman will be able to climax. Men are much more visual; women are more emotional. Simply stimulating woman with foreplay does not always lead to her ability to climax because woman need much more "warming up" than men do. It can be hard for a woman to climax if she isn't in the mood for sex, making it even more difficult for both parties. Woman know that in a lot of cases, the inability to climax can be related to factors outside of what is going on in the bedroom; work stress, home stress, relationship issues, biological or genetic predisposition, etc.

Knowing the female anatomy can certainly give you an advantage when exploring the realms of your woman, so be sure the study up or watch the video. Being unable to find the clitoris and not knowing what the cervix feels like with your finger can be a huge turn off for woman. Women want to think you are experienced, even if you know you are not.

Number two complaint was sweat. Women really don't like it. Although it's part of the masculine image, women would prefer that the only sweat that happens in bed is that which is generated together during sex. Men who smell turn them off. Feet are among the odors that women hate and which certainly turn them off. Although in times of exhaustive intercourse, it can be hard to prevent sweat from accumulating and dripping onto the other person. If you love the other person, this issue should be trivial. However, because some people are squeamish about bodily fluids in general, it would be advised to keep a cloth or a hand towel nearby to wipe down areas of the body that are most prone to sweating. For some people, it's the hands and feet, for others, it's the face, neck, and shoulders.

A lot of the smell associated with sweat is bacteria. Sweat, when first presenting itself, normally has a nonexistent to mild odor. Once the sweat has sat in a damp, concealed space such as the feet, armpits, and in other crevices near and around your genitals, the bacteria that begin to grow and accumulate are the reason for the pungent odor. Keeping yourself clean can help to prevent these odors.

Scrubbing your feet and placing them back into the same bacteria ridden, smelly shoes is basically eliminating all of your hygienic efforts because the bacteria is just going to re accumulate on your feet while wearing the shoes. Clean your shoes, if you can, with the washing machine, sink or a hose. Any areas of your body that are prone to sweat throughout the day, those are the areas that you should focus and clean the most when you are taking a shower, to avoid bacteria build up.

Number three complaint was that men have little imagination when it comes to positions. In many of the relationships of women interviewed, they came to the same conclusion. During the first flashes of passion, yes – men are quite imaginative, but then they revert to this boring style where missionary position is the only option. Come on boys, girls want more than that.

Lack of imagination can stem from lack of experience as well. Many women don’t feel comfortable taking the lead in the bedroom because they believe that is the man’s job. If the man has not had a whole lot of experience with a variety of positions, he will probably just stick to what he knows. As the relationship grows and you become more comfortable with one another, new positions should be introduced. When the introduction of new positions fails to happen, this is where the frustration sets in.

Some men are not comfortable expressing their sexuality out of fear they will be rejected. Many times, they figure out what they believe the woman to enjoy and stick to that. After years and years of the same position, it can begin to become mundane and routine doing the same positions over and over again, leading to problems in and out of the bedroom. By communicating with one another about what positions to try next, couples can avoid becoming stagnant and can help boost the man's confidence to be adventurous and try new things.

Although imagination can be a good thing in the bedroom, when one is not used to it, it can come as a surprise to the other. When introducing different types of sexual techniques and practices, be sure that the other is on the same page and is willing to humor the request. You would hate to be rejected while in the middle of a sex session.

Number four complaint although this complaint was across the board and was one of the most annoying – is that men turn over and go to sleep directly after sex and do not see that women need to be hugged. Although sex is a physical thing and you may be tired, women are not animals. They want more than a hump. They want a hump with all the trimmings. Thus, hugs are an essential part of that. This means before, during and after. It's reassuring and makes a woman feel safe and loved.

More often than not, women are wide awake after sex, unlike the man. Having the man turn over and put his back to you after sex can feel as though he "got what he wanted, now he is done with you". No woman wants to feel this way. Cuddling and snuggling after sex can be one of the most intimate parts of being together, don't ignore such a simple action. Even so much as kissing and hugging afterwards and telling her how much you care about her can be all the reassurance and attention she needs. Women cannot expect men to know that this bothers them unless they voice their concerns. Sex is meant to be both emotional and physical, not cuddling

and hugging throughout the act can take all the emotions out of it and make it feel cold and shallow.

Number five complaint was that often a man was not that interested in foreplay. As long as he was getting what he wanted, he didn't seem to care too much if this was causing discomfort to his woman. This was particularly relevant in the older range of women that I interviewed and the conclusion was that more foreplay was needed to help with lubrication. Often men blamed lack of lubrication on the woman when in fact it was the lack for foreplay that made the situation worse than it would have been. Play fair boys because you get better sex out of it and so does she.

Foreplay is one of the most important parts of sex. Passion and intimacy are at its highest points during foreplay. This is a time when you show the woman how much you love her and her body and how much it excites you. Without foreplay, you are not only going to make sex less than desirable for her, you are not going to have as nearly as much enjoyment as you would if you had stimulated her prior to penetration.

Woman take a lot longer to warm up for sex than men, although it is seemingly common for men to receive foreplay before sex without reciprocation. So, not only does the man get an immediate erection, he also gets the pleasure of receiving oral sex as "warming up". Women need to be warmed up to provide proper lubrication and comfort when being penetrated. When the vagina and the clitoris are stimulated, they naturally puff up and secrete fluids, making penetration easier and more enjoyable for both parties involved. Not only does foreplay allow the women and men to engage in intercourse comfortably, but it also allows the woman a better chance for climaxing during penetration, which is a difficult task for many women. Statistics show that women are more prone to climax without penetration. One would argue that the reason women have such a difficult time climaxing is because of the general and widespread lack of enthusiastic foreplay among the population of men.

You can see from these complaints that there is a world of difference between the way that women view sex and the way that men do. We shall devote a chapter and let men have their say within that chapter, though it is important to note, there were other complaints from women that pointed to the following turn-offs. If you are guilty of any of these, then it will help your love life if you do something to attempt to correct the situation:

- Women don’t like bad odor
- Bad breath is a turn off
- Women don’t like guys in baggy pants – they want to see your behind
- White pants and plaid shorts are out!
- Track suits are a turn off and a sign that a man is too lazy to actually have a waistband
- Tee shirts that are too short and show off a pot belly

From this you can summarize that women like men who look after themselves and who really do present themselves in a sexy, clean and fresh way. Generally speaking, if a man does not present himself in a way that shows he takes good care of himself, this has a potential to be a reflection of the way he will treat his woman. Although that is not always the case, first impressions can be critical when meeting a new person and you always want to look as though you care, if even for a moment. The man should also

be aware of his woman’s needs and be prepared to give as well as to take. Giving means giving more than the inches you were born with. It means giving from the heart and being aware of your woman’s emotions.

Chivalry is not dead and with the rising generation of younger, more independent woman, men may feel intimidated when offering help or going out of their way to hold the door or pull out a chair. When it comes to relationships and dating, simple, chivalrous gestures generally aren’t going to scare away women, they are going to show them that you care enough to make them comfortable. Take care of yourself and don’t overlook the simple gestures that can make all the difference in how woman see or perceive you.

Chapter 2 – What Men Want in Bed

If you are a girl and have a smug look on your face following the last chapter, don't be too quick to think that girls got off lightly. There are so many things that turn men on and off and you, too, need to be aware of them. Talking to 100 men, to try and keep things well balanced, what we found was that the answers were pretty universal.

Men like nudity – Although you may think that sexy nighty is wonderful, men prefer to see you in the nude and will do all they can to remove it as quickly as possible. Although this is the general "purpose" of lingerie, some men find it a nuisance and prefer to have you prance around the house in it as opposed to wearing it during sexual intercourse. If you really want to turn your man on, save your money. Use the money you save on making your body look as good as it can and you will win the day. Spend that money to keep up your skin and hair and basic hygienic needs. Similar to how a man cares for himself by showering, buying clothing, buying cologne, etc. Women are also expected to provide general care for themselves for the same reasons. People want to know that the person they are interested in can and will take care of themselves.

Men like the lights on. They want to appreciate their woman. If you are one of those women who turn the lights off the moment you get under the covers, stop and think about it. It's a great compliment that your man wants to see you naked and even if you think you are not the best built package on the block, he is with you. He will be more turned on by seeing you naked than feeling you cower away from the light in shame.

Being able to see you during intercourse arouses the man. Men are more visual, as stated previously, meaning that being able to see how they are

pleasuring their significant other can arouse them tremendously. As a woman, being ashamed of imperfections is foolish because the man you are with should love you and all of your imperfections. No one is perfect, that is what makes you perfect for him. Embrace your imperfections as your own unique identity and have sex with the lights on.

Men do like sexy underwear. A woman who wears sexy underwear is thought of as much more aware of her man's needs and wants and also very much in touch with her own femininity. If you have taken to wearing old fashioned cotton, swap it because although it may feel good, it isn't for the bedroom.

Picking out underwear for your woman can also be a good alternative if your woman tends to buy underwear that is less than attractive. Instead of telling her directly that her choice in underwear is less than desirable, buy her a pair that you find attractive and say you want her to wear them before you both engage in sexual intercourse the next time. This can be a good hint for her without a direct insult.

On the side of women, wearing cute and attractive underwear during the day can help boost your confidence by knowing you look sexy underneath your outfit. Having a man compliment you on your choice of underwear is flattering and helps boost self-esteem. Plus, cotton can cut off airflow to the vagina, causing a potential for irritation and infection should anything happen.

Men are turned on by women who are not afraid to become a vamp in bed. Of course, they don't want a woman who is cheap in her presentation to others. This is just for the bedroom. However, even the primmest of women can appear very sexy in the bedroom and the man knows it's just for him. That makes it even more of a turn on.

Women who know when and how to take control can be a huge turn on. Sex is exhausting and as a man, a huge portion of sex is left as his responsibility. Knowing that the woman he is with will let him sit back while she takes the reins can be comforting and exciting. It also helps to spice up redundant sex if the man is always the one initiating. Have the woman initiate for a change. Routine in the bedroom should always be avoided.

Some guys are turned on by women who are career minded and know what they want. They see them as a challenge and for those highly intelligent guys, this presents a great opportunity in bed. Challenging women are not scared to let her man know what she wants and that's powerful stuff under the sheets.

A woman with goals and ambitions says a lot about her character and can also be a good reflection of her attitude in the bedroom. If she likes to be in control of her future, she may be the same way in the bedroom. Certain goals and aspirations can parallel sexual desire, so pay attention. Men tend to gravitate towards women that are more of a challenge to obtain because the reward is greater overall. Anyone and everyone can get the easy girl, but men really want the girl that is hard to get.

This has been the case since the beginning of time, throughout our entire childhoods. The woman who is the easiest to get, will be shared around with everyone. The woman who is hard to get, will be enjoyed by only a select few. This is the difference between diamonds and dirt. Dirt is abundant and can be obtained by anyone. Diamonds are expensive and are only obtained through hard work, wealth and patience.

Men adore women who are happy within the skin they are in. They don't want to babysit insecurity. The problem with women who are insecure is that they are too needy and demand too much emotional stuff and that's not

a male thing – that is unless the male is particularly domineering in all the wrong ways. Needy women generally get lumbered with men who want to own them and relationships such as this are not the best in bed. If you want happy sex – learn to love yourself because if you show signs of insecurity, it's a real turn off for a man.

They always say that in order to love someone else you have to love yourself first. This is incredibly true. Whenever someone feels as though they are inadequate or less than desirable to their significant other, this causes strain and tension on the relationship. A woman who is confident in her appearance and herself is going to do a myriad better in a relationship than a woman who does not love herself. Emotional insecurities weigh down a relationship as well, so finding confidence in not only your appearance, but in yourself and your self-worth is important.

Too much makeup is a turn off for men. They prefer to see a woman for who she is, not who she would like to be. Be yourself. Let your wildness out and he will thank you for it. However, be aware that there's a certain amount of wildness that isn't acceptable. For example, body hair will be a real turn off for him. Instead of spending loads on makeup to cover up who you are, spend it on things that soften your skin and give it a sexy glow and make sure that you wax regularly.

When we say wildness we generally mean attitude related, not physically related (unless the couple is into that). Men prefer woman who portray the "lady in the street but a freak in the bed," persona. Classy and put together in appearance but like a wild animal between the sheets. Many women tend to hide this side of themselves for fear of rejection. Never sell yourself short and settle for less than what you desire because you are afraid you will not be accepted.

The pet hates of men are shown below because these are real turn offs as far as the male of the species is concerned:

- Don’t keep asking “Do you love me?” – You should already know.
- Don’t smell of sweat – always shower before bed
- Don’t talk about your periods
- Don’t cut your toenails in front of him
- Girls who try to dress cute at home – it doesn’t work. Be yourself.

Basically men like to know what they are getting. It doesn’t turn them on to be with someone who isn’t happy with themselves or someone who tries to be something that she is not. A self-assured woman who is consistent and who is comfortable with her emotions and body is far more of a turn on than one who is trying to play the part of a whore, and failing badly.

In fact, the use of bad language in bed may even be enough to make him turn over and go to sleep. He wants you as you are rather than how you think you should be. Stop playing games. Get down and dirty, but do it honestly. If you are going to introduce dirty talk, let it be something you are both privy to and are willing to try together. Otherwise you are likely to fall flat on your face because some people do not favor dirty talk.

If you would like to introduce dirty talk, casually mention it in conversation to see if it may be something she is interested in. If she is not one to talk about sexual relations outside of the bedroom, simply start off by talking dirty in short, neutral sayings. Refrain from the use of slang terms like “slut, whore, and bitch” until you know for sure it is something she will be comfortable hearing during intercourse. Using profanity lightly in the bedroom can be a huge turn on for some, and a turn off for others so make sure you prepare accordingly.

It is a well-known stereotype that a man will settle for any woman or sexual partner he can get because he “has a penis” or he “thinks between his legs”. This is not always the case. Not all men are open to everything and not all women are open to everything, meaning each person is different and has different desires. Men are historically known for being more instinctually driven when it comes to sex and the bedroom because they have always been looked too as the providers for the family. Men and women alike won’t always want to sleep with whomever they can get into the bedroom. Most people are looking for long-term relationships.

Chapter 3 – The G Spots

These are a real mystery to men, but they don't have to be. And even if women are complaining about not climaxing enough, it's as much their fault as it is their man's fault because they haven't taken the time to show their man where those particular points are and what they do. When you share this with your partner, you also let him know how to make you climax and go through the experience together. That's healthy sex.

The G spots are located, one on the outside of the vagina and the other deep within in. You need to experiment with your loved one and find out exactly where it is, as changing sexual positions may help you to locate it better. A rocking position is the best type and if you let her take charge and sit on you, she has the ability to move more and can position herself so that she is more likely to climax.

Broaching the subject of climaxes

For a man to approach a woman and ask if she has climaxed is like asking whether she likes chocolate. She will always say “yes” because woman have a caring nature and don’t want to upset their man. However, if you tell her that you want to know where all her secret places are and take the time with foreplay, you will find out and this will enhance your sex life. She isn’t likely to want to go to sleep as often if she knows that there is something very rewarding in it for her as well as for you.

Woman, especially in new relationships, generally don’t want to hurt the man’s feelings. Sex usually always feels good for the woman, so when lying about climaxing it may not feel like a “total” lie because the act of sex itself did feel great. Some men can be very sensitive when it comes to their penis, especially if they feel that they aren’t comparable to other men. So much stigma lies on a man’s endowment and if he feels he is below average he may be highly sensitive to any remarks or comments about it. It is general practice not to lie in the bedroom if you want to be with the person for a long period of time, but it is easy to get caught up in the moment and sometimes the easiest way to avoid confrontation during sex is to deal with the shortcomings not mention it. However, as a woman, it is your job to show the man what feels good to you and what you like being done to you to help you achieve an orgasm or to climax. Every woman is different so everyone ability to climax is different as well too.

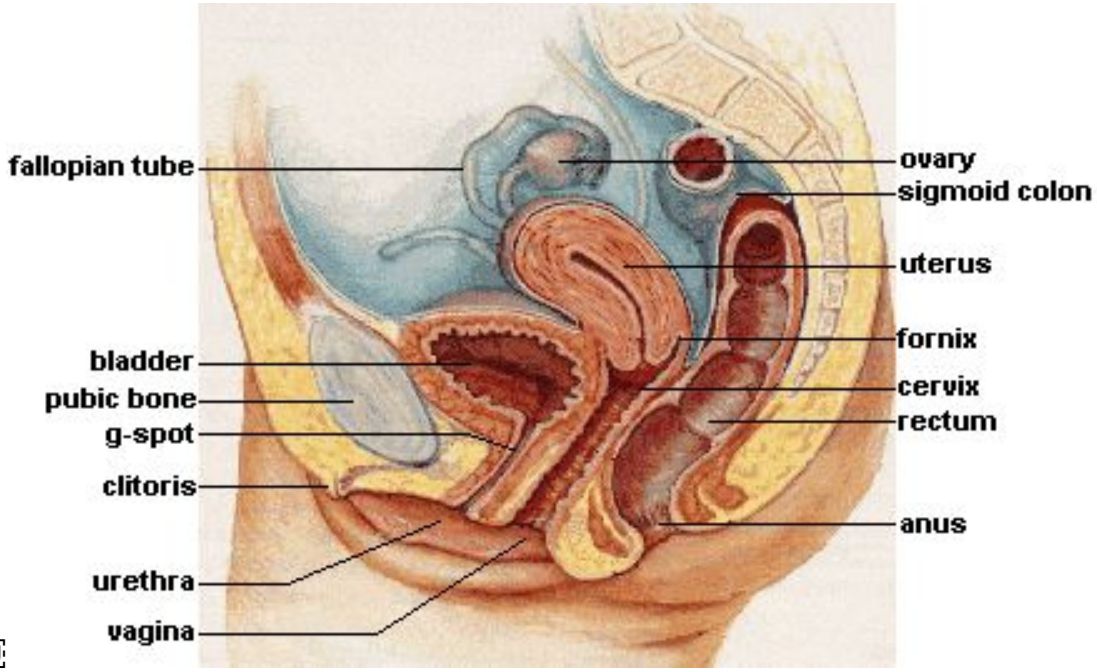

If you find it hard to talk about things like that, don’t talk. Just act. Ask her as you stroke her whether you have hit the right spot. Talk about sex openly and let her see that you don’t mind that she hasn’t got inhibitions. Women have this image in their heads that their man expects them to be white than white and won’t often volunteer this information without prompting.

There is much controversy as to whether or not the Gspot actually does exist or not. Some people say it is easily found by placing your finger into the vagina and doing the “come here” motion with the finger. Some theorists say it is different for every woman because every woman is turned on by different factors. Some woman like pain so the positions that may be uncomfortable to some woman are enjoyable for others – and vice versa. This further heightens the mystery as to whether or not the Gspot is in an allotted place or if it is dependent on what the woman is aroused by.

You can even get her to show you. If she thinks that it’s a wonderful turn on for you, she will oblige. Get her to touch the G spot on the outside and show you exactly where it is. You can even buy a vibrator for fun and tell her you want to tickle that spot.

One of the quickest ways to go about finding the Gspot is to look for it together. Have her direct your finger to the spot. Even searching for it during penetration can help you find the spot during intercourse. For men, many times you can tell where the spot is by the amount of moaning or other reaction from her. You can also feel as the vagina begins to excrete more fluids at a certain angle because this means the proper area is being aroused or stimulated. If a man never attempts to find or even asks the woman to show him where the Gspot is, there is really no other way for him to know other than the reaction you receive from her. For women, if you never show your man where the spot is by either actively engaging with him or by giving some type of reaction, you cannot expect him to know if he is pleasing you or not.

Where men tend to go wrong is that they don’t talk about these things and then wonder why their women don’t want sex as much as they do. The fact is that women like sex just as much as men do, but it has to be something that is mutually satisfying. Foreplay plays a huge part in that. The diagram below shows where these sensitive spots are:

You can see that the actual G spot is inside the woman and sometimes when you are stimulating this, you need to bend your fingers to reach the right spot. Anal sex reaches it quite easily but if this isn't something you would consider then, try putting your fingers inside her and bending them backward toward the anus as you are much more likely to hit the right spot.

The clitoris on the outside of the vagina is another hot spot and is one that will help you to get her damp and stimulation of this really will turn her on. Fumbling won't. Be manly in your gestures and don't be afraid of it. She needs to feel definite stimulation, rather than schoolboy fumbling and if you start to feel her tense, do it even harder. If men have a hard time finding the clitoris, it is at the top of the vagina, usually beneath a fold of skin known as the "clitoral hood."

When it comes to the clitoris, every woman likes it stimulated differently. Once if becomes aroused by stimulation, it can become incredibly sensitive to the touch, making it almost unbearable if the man begins to become too rough with it. A lot of men believe that incessantly licking the clitoris is

enough to make every woman climax and this could not be farther from the truth. Women need a variety of movements and efforts other than just licking. Gently kissing and sucking on the clitoris can be incredibly arousing.

With men, there are certain areas of the penis, such as the prostrate, that are more sensitive than others. Stroking the prostrate while performing oral sex on a man can greatly enhance the sexual pleasure, dependent on if the man is able to handle having a moving finger in his anus. A lot of men are weary of this exercise because it requires a finger in the anus, but relaxing and letting your significant other stroke your prostrate while sucking your dick can help the man reach a more euphoric climax.

Most people know how a penis works so I haven't gone into great detail about that. However, the parts that are most neglected during sex are the female parts that give her a climax and it is here that you need to practice the most. She won't object too much when she sees what it does to her because climax for a woman is very much as healthy and exhilarating as it is for a man. You just need to be aware that a woman has needs too and the less you care for those needs, the more likely it is that your love life will begin to fizzle out because quite frankly, one sided sex isn't much fun for her.

There are piles of videos on the Internet that you can watch together if you think that this will help your understanding of the female anatomy and the sooner you do understand it and give heed to it, the hotter your sex life will become.

Chapter 4 – Getting in Tip Top Form for Sex

If you were going to run a marathon, you would prepare for it. You wouldn't expect to get it right and win with absolutely no experience at all. However, people go into sexual relationships and expect to get it right, regardless of what shape they are in. I had one client who came to me for advice whose wife was afraid to have sex with him because he had suffered a heart attack in the past and she did not want to become the cause of another. If you keep yourself fit, you also avoid this kind of worry. Your health matters, so make sure that you eat reasonable foods, that you keep your body relatively slim and that if you need supplements to help you, you take them.

Belly fat

No matter whether you are a woman or a man, belly fat can actually get in the way of great sex. You will not perform at your best if you have allowed your waistline to spread too much. You need to try and keep yourself fit. Although people do have sex when they have belly fat, there is much more likely to be inhibitions which stop that sex from being as good as it could be. Watch your diet and respect your body because this will help you to have better sex.

Not only is belly fat unhealthy, for men it can actually decrease the length of your penis due to the amount of fat buildup at the base. The more weight you lose, the extra fat at the base of the shaft falls off adding a few more centimeters to the length of the penis. For woman, the amount of fat buildup on the vagina can keep the man from maximum penetration because of the extra skin. With two overweight individuals, this causes even more of a problem because the man is already at a disadvantage from his excess fat and the addition of the woman’s fat makes enjoyment more difficult.

It is hard to be flexible and hold your stamina when you have an excess amount of belly fat. Belly fat is an indicator of the shape that you are in and having a lot of it will slow you down and hinder your ability to try different, erotic sexual positions. Having fat that you have to lift in order to see or get to your genitals is a serious issue and should be addressed by a physician or a nutritionist before negative health effects being to arise.

Maximizing your potential

Before you prepare to go to bed, make sure that you have showered and that you smell nice. This works for both men and women and you may even want to take a shower together. Try to go to bed naked. It's much healthier and encourages skin to skin contact. Be careful that you have attended to things that may be a turn off. For example, if you have stubble on your chin, this may discourage her from wanting to nuzzle up to you. Similarly, a girl with stubble on her legs may just spoil the moment.

However, this is all dependent on the individual as some people find it attractive when they can smell the other person. It all depends on your partner and what they find arousing. It is always good practice to use proper hygiene to prevent any illness or infection if an injury is sustained during sex such as chafing, tearing, etc.

You need to look after your body and be really clean and healthy because it helps you to be sexy. Change your clothing often and always make sure that your underwear is particularly clean. Any odors in the area of your private parts is going to be a turn off and if you know yourself to have a problem, consult a pharmacy for the best soaps for this type of problem. Women also get vaginal itching or have problems with getting sufficiently lubricated for good sex. This can be overcome with creams. As far as the lubrication goes, if you are still young, then it is an indication that not enough foreplay was indulged in and you may need to encourage your partner to give you more attention before sex.

Oral sex

Oral sex can be considered one of the most pleasurable parts of the act of sexual intercourse. Not only is your partner able to focus directly on each individual area that they know you enjoy, but it also allows for exploration of each other's bodies which can help you bond and bring you closer together as a couple. Oral sex can be done before, during or after intercourse though it is typically almost always done before sex. Oral sex can be used as a form of foreplay and, if done correctly, can help each individual climax easily.

For men, oral sex is almost always expected or used to help get an erection and maintain it prior to penetration. Some men need constant stimulation orally, while other men are ok with a small amount. As a woman, know what your man wants and provide for him. This goes for men as well. Women need to pay very close attention when pleasing their man orally, being very careful not to accidentally use teeth or scrape the shaft of the penis. Woman can also use the testicles to their advantage as well by cradling them and gently fondling them in their hands. Lightly sucking and kissing the testicles can provide a great deal of pleasure as well. Again, we bring up the act of stroking the prostrate on the man by inserting a finger into his anus and gently stroking in a downward motion.

Woman should only perform this on a man if he is comfortable with it happening. Some men are uncomfortable at the thought of having a finger inserted into their anus. Woman can also engage in an act called "deep throating," which requires the woman to insert the penis into her mouth as far back as possible and begin to swallow. This can trigger the gag reflex if you are not well seasoned, so it should be done with caution if the woman is not familiar with the technique. Deep throating provides a great deal of pleasure of the man as the throat muscles massage his penis.

With women, oral sex tends to be less popular. Men have historically left the woman out in terms of oral sex for quite some time. There is a lot of speculation as to why this happens. Some woman do not enjoy oral sex being performed on them because they have never had it done correctly, some men are rough and oral sex can hurt, the vagina is a bit more complicated than the penis and its intimidating nature can cause men to shy away from pleasing it orally. As far as women go, orally pleasing her takes effort and passion. She can tell if you are not interested, the more passion you express the more aroused she will become.

Orally pleasing a woman can be done in several ways. Licking, kissing, and sucking on the clitoris that provide a great deal of satisfaction and pleasure. Combining the oral licking and sucking with a finger inserted into the vagina while doing the “come here,” motion can send her into climax rather quickly. Licking the areas around the clitoris and inserting your tongue into her vagina occasionally can be arousing as well. As with any form of oral pleasure, make sure you and your partner are both on the same page to avoid any conflict and disagreements in the bedroom that could possibly kill the mood.

Know what your partner feels about oral sex. Perhaps you would like your lady to remove the hair in the pubic area and it is quite sex for her as well because it makes this area a lot more sensitive. If you think that would be a turn on, talk about it with her and see how she reacts. It will make oral sex a lot easier and this will act as a great lubricator for the sex that follows. If, however, she is against oral sex, then don’t force this on her. It can be very traumatic for a woman if she is afraid of oral sex. If, however, she is prepared to try it, make sure that you smell wonderful and that you are gentle with her and don’t expect too much at first. She may not appreciate you climaxing in her mouth and if this is the case, you could talk to her about climaxing between her breasts that may be more acceptable to her.

Extra help in the way of stimulants

Although healthy people with a healthy appetite for sex shouldn't need too much help, there are certain foods and certain stimulants that can help you in your sex life. Capsaicin is one of the foods that gets you very sexy indeed because it is a hot food and stimulates the endings of the nerves. Thus, you feel more and your blood pumps faster, so that a meal at a restaurant known for dishes that use this may just be what you need to get yourself in the mood. Avocado and asparagus are not just posh foods. They help you to produce testosterone and other increases in hormonal activity that helps her. They can swell the clitoris and make sex very sensitive for her that will of course mean better sex for him as well.

Spinach is a vegetable that is rich in folate and helps with circulation. Improved circulation can help with arousal in the bedroom for both men and woman. Basil is another green food that can help blood flow through your body smoothly. When cooking, try to incorporate fresh basil and spinach wherever possible. Both plants are mild and can be used in a variety of different recipes.

Fox news posted an interesting article on a study that was done pertaining to watermelon and sex drive. "A 2008 article published by AgriLife Research maintains that when watermelon is consumed, citrulline is converted to arginine, an amino acid that impacts the circulation system. "The citrulline-arginine relationship helps heart health, the immune system, and may prove to be very helpful for those who suffer from obesity and type 2 diabetes," says Dr. Bhimu Patil, director of Texas A&M's Fruit and Vegetable Improvement Center. "Arginine boosts nitric oxide, which relaxes blood vessels, the same basic effect that Viagra has, to treat erectile dysfunction and maybe even prevent it".

Cayenne pepper in your food can help increase metabolism, heart rate, blood flow and sweat that can aid in the arousal of sexual advances. Although eating garlic is not recommended before a hot date due to the

negative effects it has on the odor of your breath, garlic has also been known to provide extra sensitivity to our sexual organs due to increased blood flow. Resulting in obvious pleasurable effects.

Chocolates are a feel good food that also help you to get into a sexy mood, but don’t overdo it. Overdoing the sugar intake may cause spikes in your sugar levels and that’s not healthy, though a little chocolate in bed can be seen as a very healthy and sexy indulgence. Oysters are known to increase testosterone and to increase a man’s sex drive. If you really want to end a meal with a sexy flavor, a glass of red wine will do the trick as this helps the blood flow and we all know that this is something that helps great erections to happen.

Chapter 5 – Vitamins and Lifestyle Changes That Help Your Sex Drive

In the last chapter, we covered bases on things that you can do to make yourself ready for great sex, but there is help from the vitamin field as well that you may benefit from. If you are finding that you cannot last that long when you make love, you may want to consider some of these alternatives as they really will help you to have sex for longer. They do need to be taken on a regular basis to have effective results, but the list within this chapter will be helpful to those who feel that sex should be better than it actually is.

Citrulline – Although you may not be aware of this, this vitamin comes from the melon family and has been used for stamina for years. It isn't just used by people who want to increase the length of time that they can make love. It's also used by gymnasts and people who simply want to up their exercise so it will serve two purposes. Citrulline is nature's answer to Viagra, so if you would rather not discuss your love life with your doctor, you can buy supplements of L-cutrulline, but always respect the dosage as mentioned on the pack. Taking more of it won't improve your performance. It's not a bad supplement to take in general because it will also up your energy and that may just be what you need to feel great and to have sufficient energy at night to be sure of having a good time in bed.

Vitamin E is also a great vitamin to extend your love life into your later years. If you are middle aged and find that your libido is sinking fast, this is a good vitamin to take as it will help lift you out of that period toward feeling much more like having sex. Since vitamin E has many benefits both for men and for women, it's a little bit of a sneaky vitamin because you don't even have to mention that you are taking it to get your sex life into

check! Popeye ate spinach for a purpose and eating spinach can also increase your intake of vitamin E.

Phenylalanine – This is something that is found in peanuts and all sorts of different foods such as almonds and pineapples. It is known as an aphrodisiac and if you are not eating these foods, you can buy supplements and take them daily. A daily dosage amount will depend upon the supplements that you purchase, so do respect the instructions given on the packet. Look also at contra-indications since you may be producing sufficient phenylalanine yourself and may not need it.

Magnesium, Zinc and Folic Acid – These are normally derived from your food, but you can buy vitamin tablets that will help the levels. Folic acid is important if you are trying for a baby since this can strengthen the sperm count.

The best way forward is to make sure that you have a varied diet and that it includes foods that produce all the vitamins and minerals that your body needs.

Lifestyle changes

One of the biggest problems when it comes to sex life is lack of sleep. You may think that people who don't sleep have more sex, but their bodies are unable to heal correctly. Sleep is essential to help all of the organs to regenerate and to heal after a day of work and it's vital that you have good quality sleep. If you are a victim of the times and find it hard to get quality sleep, try relaxation classes or even try lying down and listening to a relaxation tape before bedtime because this will help you to achieve the sleep that you need. If you are not getting a decent night's sleep, it will interfere with your sex life and it's important that you address this.

Sleep gives your body the ability to physically and mentally recuperate. Without proper sleep, you will begin to notice difficulties in all aspects of your life. It may not be obvious, but lack of sleep can cause irritability, mood swings, fatigue, aches and pains, and can cause a lot of unnecessary strain on your organs because while you are sleeping, your organs are resting as well. There are a lot of different ways to get your sleep in check. Your last resort should be medication because these have a lot of debilitating side effects and are not ideal to take over long periods of time. It is better to find a long-term solution to your problem by use of relaxation techniques, meditation, exercise, proper diet, and checkups to make sure everything else is healthy.

Overeating will also meddle with your love life, especially if you eat late at night. This can cause all kinds of problems because the digestion is not able to cope with this amount of food at night and you may find this is a reason why you are not sleeping correctly. Cut down the amount that you eat at night and make sure that you detox occasionally, to keep your digestive tract in good order. A great detox is to drink nettle tea. If you brew a whole pan full at a time and pour this into a plastic water bottle, you can drink it throughout the day and it will help you to detox, making your body feel less sluggish and encouraging you to be more inclined toward wanting sex!

Having energy can create a whole new sex drive you never thought you had. Overeating can hinder this energy so don’t eat more than you need to feel full. Also, do not eat right before sex to avoid getting sick, the last thing you want is to get sick in bed. Overeating also leads to weight can which in turn, leads to belly fat. We have already discussed how belly fat can negatively affect your love life.

Drinking water is also important from the male and the female perspective. If helps you to keep your skin smooth and refreshed and it also helps your body to hydrate which will help you to be able to sustain sex for longer. These are habits that you need to employ if you want the best chance possible for your love life to keep going years into the future.

Lowering stress can help you in the bedroom as well. Having high amounts of stress can cause men to have difficulty ejaculating or getting and maintaining an erection. High amounts of stress in woman can cause her to be unable to climax because of the amount of thoughts and stressors on her mind. A lot of us do not realize the incredible effect on our health that stress has. It causes our muscles to tighten, making it more difficult to relax and get comfortable during sex. Being able to erase all other problems and just focus on sex can be difficult, but trying different outlets like exercise, meditation, yoga and pilates can all have a positive impact on your life.

Chapter 6 – Great Sexual Positions for Her

In this chapter we are going to go into the positions that are best for her from several viewpoints. For example, if she likes to feel emotional attachment, then the positions that are chosen have been given as examples because they allow that intimacy that is important for a woman. Conversely, she may want a deep experience and this can be achieved by using the positions that are shown later in the chapter.

Emotional positions

These are important from a female point of view because she loves emotional security. A woman is driven by emotions. She needs to feel needed. She doesn't like to be used and certainly will not react well if there is not a little emotion mixed in with other sexual positions. Women like variety, but it is the emotional positions that will really win her over.

In the end though, most positions can be turned into emotional positions with the use of excessive rubbing, touching and kissing. For example, entering a woman from behind can feel very empty because you cannot see her face and her reactions. However, by reaching your hands around and cupping her breasts, kissing her back and lower back, and even gently pulling her hair can turn this seemingly shallow position into a position of great intimacy and emotion. You will get out of sex, what you put in, so keep this in mind. You cannot expect certain positions to come off as emotional if you are not willing to put the emotions into the positions.

If your woman is sleeping with her back to you, this is an ideal chance to cuddle up spoon fashion and to hold onto her breasts. She loves skin to skin and this is about as good as it gets. She will also feel if you want sex because this will be obvious and she has the choice of whether to respond or not. Don't expect a response that is favorable every time. Sometimes a cuddle is enough. However, if you don't get too masculine and push yourself on her, she is much more likely to be receptive and even encourage you to move so that you are inside of her.

This position is warm and loving and ideal for mornings when you wake up. It shows a great deal of respect for her and she will respond to it in a very positive way. It's also a great starter position that can easily lead to other positions that may be even deeper and more passionate. Kissing her gently on the back of the neck and licking her ear lobes can help with arousal if

your end goal is penetration. Whispering sweet or dirty phrases and sayings in her ear can help to arouse her as well.

Another emotional position is the reversed missionary, because it puts her in control and you get to admire her body at the same time. This is a great position with her seated on top of you and in control. It shows a great deal of trust on the part of the man and he should encourage her to do what she will! What he is accepting when he encourages this position is that he sees her as an equal and that's very important in this day and age. It isn't all about him. It's about both of them and this position says he is open to that kind of thinking.

Crisscross is a wonderful position that allows for easy access to the woman clitoris, usually requiring stimulation in order to achieve an orgasm. Crisscross is when the woman lies on her back and the man lies beside her on his side. She drapes her legs over him in an "x" position, allowing him to enter her from behind. This also gives him easy access to caress her breasts or kiss her, allowing for deeper connections during sex.

The coital alignment technique is said to be the "greatest sex position in the world" because of the close physical connection and the best clitoral stimulation. This position is started in normal missionary position but is then transitioned by the man leaning forward and putting all of his weight onto her. He is this supposed to move himself forward until the base of his penis (also known as the pubic bone) is touching her clitoris. The woman then wraps her legs around the man's thighs and they move together in a rocking motion.

The ankles-up position involves the woman being on her back with the man in front, like the missionary position. From here, instead of him leaning forward, he is going to stand straight up and grab each of her ankles with his hands. Holding onto the ankles, he is going to then thrust himself into

her. This allows for great depth and a visually stimulating picture for the man.

Positions that will give depth

There are several positions that give extra depth and if a man is smaller, or worries about his size, then these are probably going to be the best for him as well. If you start with the spoon position and then move so that he is kneeling behind her, this position gives him great access and means that he can get deeper. That means that he will feel more but it also means that he is more likely to reach those places that women really need the man to, in order to achieve climax.

Using a pillow can also help with deeper penetration and maintaining pleasure. A pillow can either be placed under her stomach while participating in doggy-style, or underneath her lower back when participating in missionary. This elevation provided by the pillow allows for deeper penetration and a great visual for the man as well. There is easy access to the clitoris for either the man or the woman, and both parties have an amazing view of each other.

Another position that is good starts with missionary position or reversed missionary with either him or her on top. If she is on top, then he rolls her over so that she is beneath him and then moves away a little so that he can grab her legs and place her ankles onto his shoulders. This too is a very deep experience and she will certainly appreciate that because it means that both are satisfied. If you are doing this for the first time, and you are well endowed, take it slowly at first because she may not be accustomed to that depth and it takes a little while to become accustomed to it. Too harsh a movement may hurt her. Remember that her participation is as important as yours. If you are going to try deep sex, then make sure that she is aware of how deep you are going to go. She may, on the other hand, encourage it and pull you toward her so that she takes everything that you have.

Having her bend over and spread her legs apart slightly, allowing him to enter her while he is on his knees behind her, gives a great deal of depth as well. Entering from this position can be done rough or gently depending on the needs and wants of the woman, always enter gently initially to avoid injury.

Having the man sit on the edge of a chair or a solid object, then having the woman sit on his lap facing him provides deep penetration. The woman can take control or she can stand on the balls of her feet and have him take control, whichever the couple prefers. This position can also incorporate a great deal of kissing, making it more passionate, because you are face to face with one another.

A position called the butterfly is done when a woman lays on her back with her legs spread apart. The man is standing and enters her from the front. She then angles her hips upward and places a pillow or a blanket to help keep her hips elevated. The man continues to enter her this way, allowing for maximum penetration.

Shyness

Respect a woman who is shy and take it slowly. She may have self-image problems and it will take her a while to trust that you love her just the way that she is. Never make her endure being vulnerable. Instead, it is better to encourage nakedness slowly until she reaches a time when it is no longer a problem. Then, you really can explore each other's bodies without inhibitions getting in the way. If you try to take it too quickly in a situation like this, you may frighten her, which may make future lovemaking episodes even more difficult. It's important to gain her trust. You have to appreciate that women are shy for different reasons. Some – it's just a question of body image. With others – they may have experienced something that frightened them in the past and will need your help and understanding to overcome their fears.

Some women are taught that sex is a man's game and to abide by his wants and needs. Some women are taught not to cater to a man's needs in the bedroom, but to instead focus on what each of you has to offer. Being shy in the bedroom can be a mixture of how one was raised along with how comfortable one is in her own skin. When dealing with a woman who is shy, compliment her often and tell her everything you love about her. Tell her she has nothing to be shy about and encourage her. Different women come from different backgrounds. There is no telling what caused her to feel shy about being in the bedroom.

Chapter 7 –Great Sexual Positions for Him

You may be surprised that there are positions that are clear leaders both for women and for men, but for different reasons. A reverse missionary, with her on top, is actually the number one position for a man. He puts her in control and you may think that men don't like that, but you would be wrong. If she is taking the lead, she is pleasing herself, but she is also freeing up his hands, so that he can enjoy her contours. That's important to a man. He can fondle her breasts and enjoy himself and when he wants to take control, it's very easy from this position by simply flipping her over!

Missionary position, although fairly boring if done too often can also be very passionate for a man who likes to take control. He loves the skin to skin contact. It gives him the animal feeling of being in control and that's a natural state for a man to feel good in, especially in bed. Not only that, he can feel her hips pushing toward him and can allow him to pull her toward him so that lips can lock in passion. Some people love that closeness and a man likes to feel he has his woman ready to kiss, to hold, to fondle and to love and this position gives him it all. It isn't as dull as some may suppose, because it gives a man a lot of thrust. It's an easy position for him to use his full thrust to fill her and to feel her responding to him.

If you are going to do the missionary position, be aware that men hate resistance and sometimes this is a position that seems to encourage that. You need plenty of foreplay because if he cannot enter you, he will find it frustrating. Thus the foreplay should be encouraged so that there is no difficulty at all entering the vagina. It's also a fallacy that men only like this position because it gives them control. Yes, they do have control, but they also like their woman to move in harmony with them, rather than just lying there letting them do all the work.

In intimate positions such as these, the aroma of the skin is vital to the situation because odors really can put a man off. Make sure that you have bathed. Make your skin soft with oils and also make sure that you breath is superbly fresh. There is nothing worse than a man leaning forward to kiss a woman who smells like last night's ashtray.

Doggie style allows a man to give more thrust and to be in control. This is the position that also gets him deepest inside her. He also gets a great view of her and can see himself entering her vagina, so that this works as a stimulation to make him feel even sexier. How the woman controls the situation is by placing herself in such a position that she gains a little control as well and can tease him a little to make the lovemaking last longer. In fact, if he wants her to, she can do as much thrusting as she lives taking in as much of his penis as she feels that she is comfortable with. That makes it a win win position for both the man and the woman. The only snag with this position is that it does encourage the man to climax early, so it's better to start in another position and to move into this position for the finale, by which time both man and woman will be ready for that violent thrust and can enjoy joint climaxes if they get it right.

Most men have fantasies about quickies and although this isn't what people should do all of the time, the naughtiness involved in a quickie really will turn him on and drive him crazy. Whether this is against a wall, over a table or sneaked in when no one is suspecting it, the naughtier the action, the more the turn on. It has to be naughty. It has to be quick and it has to feel good for both. Thus, expect it to be over quickly, but expect it to be both violent and crazy because it will be. This gives a man a great sense of control but it also shows him how naughty his woman is prepared to be.

The 69 position is a favorite for men who love oral sex. It puts both in control of the other's climax and if you go by the old Kama Sutra belief that sex isn't about you, it's about pleasure to your partner – then this position

really does work to do that. Both of you are giving each other pleasure. However, there are snags with this position. If she has hair, then perhaps this would put you off, and if may be a good thing to encourage her to remove it, though never encourage this in a way that makes her feel like she is lacking in some way. Introduce the subject and say how you think it would be if she had no hair. Similarly, a woman may not like him climaxing in her mouth and may be shy about it and in a case such as this, you can turn at the last minute and penetrate her so that the climax happens inside her and you both feel the benefit of it.

Men and women have different preferences because of the way that they are built. The reverse cowboy is favored by some men, because he can see her but he can also see himself entering her, which is a great turn on. If you try these positions, you won’t go far wrong and the naughtier the nicer. Men like to know that their women are fully involved in sex and are enjoying it as much as they are.

Chapter 8 – Why Dialog is Important

If you were having a one off sexual situation with a stranger, then silence might do you both a service, but in the case of sex with a regular partner, dialog is what helps the sexual experience grow. You get to know what you both like. You get to talk about your fantasies and may even get to live them. The kind of problems that can occur if the dialog is not there are:

- She may reject his initiation for reasons of her own which he may misunderstand
- She may never initiate sex because she is worried about what her partner may think of her
- He may never indulge in foreplay because she hasn't said she wants it
- He may not know where her sensitive spots are because they have never really discussed it
- They may never know each other's fantasies and miss an opportunity to fulfill them

There are many relationships that hit muddy water because of lack of dialog. She didn't want sex because she was feeling ill. He automatically thought that she was rejecting him and got to a situation where he no longer initiated sex. She thought she was unloved. It's a typical scenario where dialog would have made the difference. It is situations like this that lead to misunderstandings that may even lead to a relationship breaking up. We often see on TV the man who wants sex but whose wife does not. We also

see girls laughing together about the fact that men have no idea what turns them on.

Dialog allows all this. The introduction of porn isn't necessary, but some couples find that it breaks the ice and allows them to talk about things that they would otherwise find impossible. "We watched someone having anal sex," explained one lady, "and the woman seemed to be enjoying it immensely, so we thought we would try it." Her husband actually enjoyed it because it was a very tight experience and as she had given birth to kids over the years, she had lost the elasticity of the vagina. Having anal sex allowed them both to rediscover pleasures they hadn't experienced for a while.

Anal sex can be a great way to explore and experiment with one another to see what each of you likes and dislikes. Some men are completely opposed to anything anal related whereas other men fantasize over it. Depending on your desires, anal sex should be practiced carefully and with a large amount of lubrication to avoid ripping or tears. Condoms should also be worn to reduce the incidence of infection for both parties involved. Anal sex can be highly enjoyable for both women and men and can be extremely desirable when combined with vaginal or clitoral stimulation.

"He wanted me to dress in suspenders and sexy underwear," said one woman after talking to her husband about his fantasies. She actually changed her priorities. She had always given priority to the clothing that people see but not to the underwear she wore. When she did, it actually improved her attitude too, because she felt very sexy and they both enjoyed the experience.

It is incredibly important to talk to one another about your sexual fantasies. There is no reason why you should keep these to yourself and why you both shouldn't entertain the others sexual fantasies every so often. Once married,

having to spend a lifetime keeping your sexual fantasies hidden could lead to potential problems in the future, talking and sharing keeps you both in the loop and aware of what the other one wants.

“My husband loved to make love out in the open” said another woman. “It was a fantasy of his.” She explained that they had found a way that they could do this and that out in the garden with skin against the warm summer evening grass, they found their fun in sex again, even though they had lost this years beforehand.

Having sex out in the open or in nature can been very animalistic and raw. One of the reasons we as humans enjoy it so much is because it’s the way our ancestors used to make love; its engrained in our history, it’s instinctual. What is most interesting about having sexual intercourse outside is how widely practiced it is. Yet you never see it taking place (which is the idea, you certainly do not want to get caught having sex in public). Most people assume they are the only ones doing it, though this is hardly the case. Having sex in the water is also pleasurable for some, though for women who have problems with lubrication, it can cause problems if you wish to continue the session outside of the waters.

The dialog between a couple in bed is every bit as important as the dialog that they enjoy during the day. If your partner does not know what your fantasy is, how can he/she fulfill it? That’s why many couples do open up and try to discuss different things about sex, so that they can experiment and have fun with sex. It’s something that couples shouldn’t shy away from because this dialog allows them to get to know each other better and to cater for each other’s deepest desires.

Just speaking to one another about each other’s wants and desires can bring your relationship to whole new level. Being comfortable enough around your significant other to explained to them what you want and what you are

or aren’t getting can keep conflict and distress from building up and taking away from your sexual enjoyment as a couple. Communication in any relationship is number one. You can’t hide things from your partner that bother you, and expect them not to boil over in the future.

Never tried tantric massage? This is a real eye opener and if you haven’t tried it yet, wait for an evening when you know you will have no interruptions and give it a try. This is where oils are used to rub against the sensitive areas of the body and huge climaxes can be reached using this method. While the massage is going on, the dialog between you is also part of the picture and believe me, it’s going to be very sexy indeed. The idea of this type of massage is total pleasure and if you can go into it with open eyes and a good dialog with your partner, you should be able to explain the tingling sensations that happen and give your partner a great indication of places that are touched which give the most pleasure. This dialog all helps you to discover each other’s bodies and enjoy your sex together.

If she has a headache, don’t read into it. A headache is a temporary hiccup. If you see it as a rejection, it means that the lack of dialog between you is getting in the way of your love life. Talk to each other, understand each other and never be afraid of experimenting together. You may even find new ways to make love that you never dreamed of but which happen as a consequence of your bedtime discussions. In fact, if the headache is tension related, sex might help to alleviate the headache because sex released endorphins which can counteract the effects of cortisol, a hormone that is released during large amounts of stress.

Chapter 9 – Keeping Your Sex Life Steaming Hot

The intimacy that is felt by a couple doesn't have to come to a grinding halt the moment you hit difficult situations. It should always be there. You need to keep it alive. A woman can send a sexy text to her husband giving him a promise of what's to come when he gets home, but a man can do sexy things too. He can bring home a bottle of wine and a sexy pair of panties any time he wants to and insist on her modeling them for him. It's all about adoring each other. The moment you stop that adoration; your love life becomes stunted.

Remember – she's the sentimental and emotional one

Women are always receptive to sex if their emotional needs are dealt with. They love flowers, they love flattery, and they love being loved. If a woman feels loved, she will try anything that you want to try and it's important to remember that. Let her feel used and miserable, and your love life will dry up faster than an oasis in the desert on a hot day. The problem is that while men don't need this kind of emotional commitment, women do. Adore her, love her, shower her with love and expect a hot return. She will be available to make love in the shower when you come in from work. She won't mind making love on the rug in front of the fire. She won't even mind showing you what she does with her vibrator and letting you have a go. Forget about her emotional needs and you set yourself up for disappointment.

Make her feel beautiful. Take photos of her. Touch her and encourage her to tell you where to touch her. Run your fingers over her skin and feel her body react. Your fingers will tell you when there is a reaction. Tell her you love her because she is so receptive to your touch. Remember the emotional link when you are dealing with a woman. A woman who feels secure and

loved won’t mind being the vamp occasionally when you want animal sex, but if you forget her emotions, she will tell you where you can go to get that type of relationship. She demands respect and if she doesn’t get it, she’s hardly likely to fall in with your image of bondage or making love in the park. That respect and emotion is central to everything that you do with her.

Remember – He is a driven animal

Your man may be a perfect gentleman. He may be your idea of masculinity. He may treat you with respect but when it comes to his actions in bed, a man will be thinking with a part of his anatomy that isn’t located in his head. His hormone levels will rise and being the hunter of the human race, he will be trying to get what he wants. That doesn’t mean that a man won’t respond to kind and loving love-making. What it does mean is that the sentimental side of it may not be as important to him as it is to her. However, if he is kind and loving, he is liable to respond to her needs.

The man’s aim from sex is to have a great erection, to feel driven and to eventually have a wonderful climax. Thus, quit your whining. He doesn’t want to know about what you think about the next door neighbor, how the cat bit you or whether someone on Facebook upset you – at least not when it’s time for bed. You need to understand that for him, it’s sex pure and simple and although he loves you, he needs you to concentrate on sex so that it’s good for both of you.

This is why it is a good idea to leave all electronics outside of the bedroom and refrain from having a television in your room. If the television must stay, keep it off at night time as it can be distracting during sex and bonding time. When it is time for bed, everything else needs to be put away, climb

into bed and focus on one another and not anything else that may be going on social media wise or television wise. This can also be said for any time you are out and about, spending time with one another. Spend time with each other, not looking at your phone or social media.

One thing that one couple found was a middle ground. They were able to talk during sex and had a great laugh through doing that. Their relationship was the strongest I have ever come across and this seemed to be because she didn't overly demand emotional stuff when he was trying to strut his animal stuff. Their lives seemed to be in synch and they had a great love life right up to their senior years.

When you remember the masculine needs and also respect the feminine needs, you find that your love life can be electric. It's like being on the same page and in the same place at the same time. There's a certain decorum about your sex life and if you cross the lines, and get it wrong, boy do you get it wrong! Thus, for men to make the most of sex, remember her emotional needs. For women to make the most of sex, remember his animal needs and steer him to understanding your bodily needs. From the video that we showed you at the beginning of this book, it would seem that most males do need that extra bit of education when it comes to knowing which of your buttons are the right ones to press.

Men need to remember that she's emotional. She has hormonal problems once a month and during this time, it's best that you simply cuddle up and make her feel loved. If you can put away your animal instincts and do this, she will love you all the more for it.

Toys

The introduction of sexual toys into the bedroom can help to spice alive between the sheets. There are hundreds of different sex toys to use in the bedroom, which might be of a surprise to people who are used to the vanilla form of sex. Starting off with a few of the most well-known sex toys, the vibrator coming in as the most well-known. Dildos are the form of vibrators that do not vibrate, both toys come in the shape of a penis, torpedo – anything relatively similar to those shapes. These shapes can also be angled upward to better reflect the natural penis. Vibrators and dildos are easy to use and offer pleasure for both the men and women alike. Dildos specifically created for anal play are also available.

Focusing on the anal region, there are a few different types of toys that can be introduced and used that pertain to the anal cavity. One thing to keep in mind when venturing into the anus is that, anatomically, the anus is not designed to have anything inserted into it. The anus is, more or less, a one-way freeway for our excrement. Due to this fact, you need to be extra careful when inserting and playing in this area. Only use toys that are specifically designed for the anus and never let go of any toy that has been inserted more than 75% of the way in because the anus acts as a vacuum and will suck up any objects that are left. Seems strange when the anus is supposed to only be one way, however the muscles are the same muscles that help keep your feces in when you don’t have a place to use the restroom.

Also, be careful to always use lubrication as tearing and rips can easily occur and are prone to infection because of the area they are located. Although it is rare you would get sick from your own bacteria in your colon, it is always better to stay on the safe side. Lubrication should also be the kind intended for intercourse and nothing toxic or intended for other uses.

The first toy we will go over is the butt plug. The butt plug is shaped like a like a wine stopper and is inserted into the anus like a plug; hence the name. The reason butt plugs are used during intercourse is because some individuals find it pleasurable to have something in their anus during sexual intercourse or masturbation. For couples that are planning to engage in anal sex, a butt plug can help relax the muscles surrounding the rectum that makes the process of insertion into the rectum easier. Butt plugs come with a flared end so that once inserted, there is a low risk that the plug will be sucked into the bowels.

Another sex toy that is designed to be inserted into the rectum is anal beads. These beads are balls linked together on a chain with a flared or handle end so they don't get sucked into the rectum. These beads are used to help enhance sexual intercourse by adding pressure in the rectum and euphoric sensations upon insertion and removal. These toys can be used by either men or women and come in a variety of sizes and lengths.

Focusing on the men now, there are a few different types of toys that cater to you. There is a toy called the "penis ring," which is a ring that is inserted at the base of your shaft, behind or in front of your testicles, depending on size, preference, and the type you purchased. The rings help men who have a difficult time staying full erect but constricting blood flow in the penis, making it stay harder for a longer period of time. These rings benefit both women and men for obvious reasons; woman get to the enjoyment of a strong and lasting erection and the man gets the enjoy himself and the pleasure he is giving to the woman. The penis rings are also available ribbed, plastic, rubber, and vibrating. The vibrating penis rings can add even more pleasure for the man, allowing the woman to feel slight vibrations through the penis.

More sex toys geared towards men are prostrate toys that can be inserted into the anus and made to vibrate on the prostrate. These toys are usually

shaped like a long rod with an egg shape at the end. Men can insert these themselves or the can have their significant other do so during oral or penetrative sex. Other sex toys for men do exist, though they are largely based on single masturbation so they would not be appropriate for this section.

For woman, along with the vibrators and other items mentioned above, there are a few more toys that can be added to sex to enhance pleasure. One of these toys is the “G spot vibrator” which is similar in shape to the male prostrate vibrator, however it is angled slightly different to accommodate the female vaginal anatomy. This can be used during anal intercourse to help the woman climax during anal sex.

There are also clitoral vibrators that can be used during vaginal or anal sex, helping with arousal and stimulation of the clitoris. It can be difficult for some woman to climax during vaginal intercourse. That is why toys like these can help solve that problem. They can be held by either the man or the woman during intercourse, whichever is most comfortable.

Bonding without sex to create better sex

Bonding with one another outside the bedroom can seem like an impossible task for some. Traditionally, we get up, go to work, come home, eat, spend time together in the form of television, games, or reading. Sometimes this time is spent in separate rooms before going to bed. Once in bed, this should turn into your bonding time as a couple. You are so busy and tired during the day it’s hard to even have the desire to put effort into your stagnant relationship. This not only causes damage to your relationship over time, but it also has a huge impact on your sex life. If you don’t find one another desirable even when you are exhausted, something needs to be done.

There are a bunch of small, erotic things you can do with one another that will echo into the bedroom and help to spice up your sex life. A seemingly strange yet surprisingly fun act is the male shaving the woman's legs. This can be seen as erotic and relaxing for the woman and pleasing to the man because he gets to touch her rub her smooth legs. It will bring you closer to one another and help you notice things about one another you may have missed. Depending on taste, the man can also shave the woman's pubic region. Perhaps he wants to try something new and shave it bald or leave a strip or a patch of hair? Allowing him to take control of your body can be seen as incredibly erotic to the man while also giving a feeling of pampering from the woman.

Taking bathes together can be very sensual. Depending on size, it may be difficult to fit both of you in the tub at one time, but if it is possible to fit, take advantage of it. With the man in back and the woman placed in-between his legs, pressed up against his penis, he can wrap his arms around her and play with her breasts and kiss her neck. Soaking in the warm water together and enjoying touching one another is highly erotic and can lead to other sexual acts later on in the night.

Cuddling on the sofa or chair together when watching television can be a huge act of intimacy. Instead of sitting apart or across from one another, slide next to one another in a lying position and gently rub one another. This is especially important after a long day at work because you have been away from one another all day. Even giving each other a small hand massage while watching television can get someone into the mood and help them to relax. It is all about the little things in relationships that help build up the desire to be with one another sexually. Cuddling should never be ignored.

Going for walks together after work can bring you closer together as well. Instead of coming home and engaging in other tasks to mindlessly staring at

the television, go for a walk together outside and talk about your days. You may be surprised at what the other has to say. This can help bring you together and bond with one another while also engaging in physical activity. Even talking with one another on a walk about having sex later can get you both excited, especially since the blood is already flowing from your walk. Never ignore the benefits of physical activity on your mental, physical, and sexual states and relationships.

Having a date night where each of you dresses up in some of your nicest clothes. The woman gets all dolled up with her makeup and outfits and perfume, the man wears his best cologne. Make the bed (if not already done in the morning) before you leave so you can come home to a more picturesque bedroom. Spend the evening chatting and have one drink, one appetizer, split an entrée and share a dessert. Sharing meals can help you realize how much you care for each other and how much you enjoy sharing not only your food with them, but your life. When coming home and preparing to get undressed, spend a few moments passionately or gently kissing on the bed before beginning the process, this might lead you to some sexual excitement before preparing for bed.

Spend one weekend morning cooking breakfast with one another. Spending time with one another doing simple, everyday tasks and enjoying one another's company is one of the best parts about being in a relationship. Being best friends and wanting to spend all your free time with your significant other – that is why you picked each other right? It can be difficult to make time for tasks like this, especially if you both have different schedules. You have to make time if you want the relationship and the sexual energy to continue. Caring for one another and showing that you care will reflect into the bedroom.

These tasks may not seem like they would make much of an impact on couples who have been together for a long time, but you would be surprised to know how much of an impact it does have. Being with someone for a

long time and having sex with someone for long periods of time can begin to seem monotonous. You or the other may desire less and less time with one another because you “see each other all the time” when the reality it you don’t. You may see each other, but you don’t look at each other. You don’t admire one another.

These tasks help you to go back in time and see what drew you to the person you are with. It is easy to think you are spending time with one another when you really aren’t. There is no talking, just being in each other’s presence. Now, don’t assume that every minute spent with one another needs to be filled with mindless chatter because it doesn’t. Being in each other’s presence is a wonderful thing when do occasionally, but day in and day out of sitting with one another and not having a meaningful conversation about one’s feelings on certain issues can begin to harden a relationship and make you resent one another.

Never overlook the small stuff because, like I said before, a bunch of small stuff can lead to a boiling over. Talk to one another, spend time with one another, touch one another and you may be surprised the impact it has on your sex life.

For couples who have not been together as long as others, or for couples who are not yet married, this time if for exploration and learning about each other’s wants and desires. You are not committed to one another under vows (as you are with marriage) so you can use this freedom to express yourself sexually and freely and see what is accepted by your partner. If your significant other does not accept or approve of your desires, then you have the freedom to search elsewhere. You commit to someone that you could see yourself having a healthy sexual, emotional and physical relationship with for the rest of your life, not someone you have to “settle” for.

Edibles

Being adventurous in the bedroom can be done with more than just toys and costumes. There are other ways to be equally as exciting while also enjoying some sweet treats as well. There are edible items of clothing that are made of different candies that can be worn by either the man or the woman. The other partner will then bite the candies off and feed them to you or nibble at them and eat them, teasing the other. This can build the anticipation for the act of sex to occur, or the buildup of foreplay.

Edibles can also be in the form of whipped cream or chocolate syrup (among other things) these are some of the most commonly known of the edibles. You can place the edibles anywhere on the body, if you are a man placing, for example, whipped cream on the woman, there are a few spots in which you should pay close attention to. Placing some on the clitoris and vaginal area can be arousing, as well as placing a line down her stomach for you to eat off. You can also place whipped cream on her nipples because the nipples are a very sensitive region. There may be other areas she wants you to place the whipped cream so it is all up to you.

If you are a woman placing, for example, chocolate syrup on a man, you may focus on similar areas that the man did for the woman. Placing syrup at the base or the tip on the penis and licking it off can be arousing, along with placing syrup on the testicles and gently licking and sucking the syrup off. You can also draw a line or squiggles with the syrup and trace the lines with your tongue. This can be fun for the guy if you give him the chocolate syrup and let him make a trail where he wants you to go and you trace it with your tongue. It is also arousing to have the nipples licked, even for the man. Placing a drop of chocolate syrup on his nipples and sucking it off can be incredibly arousing.

Chocolate has been known to be an aphrodisiac, which is why it is offered in a lot of different forms for sex. There is a chocolate dusting powder than can be dusted onto the skin and licked off, along with chocolate syrup and chocolate candies on edible clothing. There are other forms of edibles as well, including flavored condoms for couples who use them during intercourse or for oral sex. The flavored condoms help to mask the latex taste and feel in your mouth, making the use of them a bit more pleasurable.

You can use candies for other uses than edible underwear or clothing. You can use them to make a trail, along the same lines at the chocolate syrup, and either suck or gently use your teeth to eat them off of your partner. This can be arousing because the delicate touch of your lips and teeth on their skin can build up anticipation of what is to come. Candies of all kinds can be used, along with different kinds of chocolate.

The use of ice cubes can be enjoyable as well. When we get excited and aroused, we naturally heat up. Using ice cubes can be arousing and stimulating because it counteracts the heat. The contrasting temperatures can be highly enjoyable. You can use the ice cube by keeping it in your mouth and poking it out each time you kiss your significant other in different areas. You can also place the ice cube on their stomach and use your finger to push the ice cube around their body, grazing other the nipples and over the penis or vagina quickly. You do not want to hold the ice cubes on your private areas for too long because there are a large amount of nerve endings and the pleasurable experience can quickly become painful if not careful.

Role-playing is also a wonderful way to keep things exciting in the bedroom. Sometimes, having sex with the same person can become boring for some, and there are ways to change this by losing yourself in a world of imagination. You can both take on different personas, even dress differently than you normally would. Some couples act out affairs while others pretend to be two strangers who met in a bar. There are thousands of different

scenarios to choose from. Having the guy come home from work pretending to be the mailman, the garbage man, the mechanic – any of those things can be arousing. The point of roleplaying is to take on new roles and give the impression that you are having a sexual encounter with someone other than your normal sexual partner.

Role-playing can also be used to help the other person pretend to be something they aren't, like an animal or a person of a different gender. Role-playing can really help some people express their imagination through sex and depending on your partner, it can get a little bit overwhelming. When beginning the act of roleplaying, each choose a roll that is similar to their current persona, just to help warm up. It might even be a good idea to start off with only one of you roleplaying.

Chapter 10 – Sex and Culture

Different cultures have different attitudes towards sex. Americans and Europeans tend to be more open about sex and their desires whereas other cultures can be a lot more private. Asian culture typically has the woman as being very submissive and meek, allowing the man to do with her as he pleases. These couples are generally known to not allow others in the bedroom with them. Sex is simply done between husband and wife. A lot of American men find Asian women desirable because of their known submissive qualities in the bedroom. This culture also frowns upon the woman engaging with other men without the husband's approval.

Hispanic culture generally practices sex as a means for reproduction due to their strong Catholic beliefs against birth control. Due to the lack of birth control, Hispanic families tend to have larger than average families. Hispanic men are generally the workers in the family while the woman stays at home and cares for the kids.

American and European culture is a melting pot of desires. Because there are so many different types of people in these regions, there is a huge mix of what people find arousing and desirable. You may have clashing cultural beliefs on sex that give rise to new and exciting techniques. These cultures, in some cases, welcome the idea of bringing in other couples into the bedroom for fun, known as "swinging." These cultures also have resorts and clubs focused on nudity and sexual expression. Porn is common and in some ways, encouraged among men and women equally.

Sex culture has also changed throughout the centuries and even most recently, the decades. In the early 19th century, sex was between a husband and wife and was talked much about outside of the bedroom. Earlier than

that, men were permitted to have more than one wife. As time went on, the “roaring twenties” brought about a whole new type of sexuality with the introduction of the flapper.

The depression hit, wars were fought and at the end of it all, there was a giant baby boom from all the soldiers that had come back from the war. As time continually passed, the joining or a husband and wife was seen as traditional and was something to aspire to. Men and women had sex with their husbands and wives and that was that, not much else to elaborate on. The early twentieth century began to glamorize sexuality more in music, style and movies.

Today, there are many cultures that only practice sex as a means for reproduction. There are certain practices we Americans may find to be taboo, but for other cultures, these are the norms and what Americans do is a form of taboo. Americans are one of the cultures that practices sex as a means for pleasure more often than for reproduction purposes.

In the current day and age, sex and sexuality is a topic that is no longer kept under wraps. Although the traditional, husband and wife sex is practiced, it is not uncommon for couples to be more adventurous and invite more people into the bedroom if it’s a mutual agreement. There is also more use of sex toys, pornography, lingerie and bondage than previous decades combined. In past, present and future times, sex provides pleasure for all cultures alike, in combination with a natural desire to reproduce.

Cultural Taboo

There are a lot of different practices and arousals throughout the world that may seem like taboo to us. When trying to gain a perspective on how certain activities like this are accepted, you have to realize that this is all they have ever known. In most cases, they are born into the culture and never know anything but their own. In some cases, the culture they are in could view our traditional sexual practices as taboo.

Sex dolls have come a long way since they were first invented. These dolls are now sold and can make sounds and short movements to give a more realistic feel. Some people will buy these dolls and treat them as their significant other. It can seem strange to some to house a doll in your home as a person, this is why it is considered “taboo”. However, the people who engage in this see this as normal and enjoyable.

There is a tribe deep within Central India that participates in a ceremony called Ghotul. This ceremony consists of teenage men and women celebrating and participating in orgies and sexual romps. There are also teachings of songs, culture and food. The teenage girls drink a natural liquid to reduce the likelihood of pregnancy, and every night the girl picks a new sexual partner. If one of the girls does become pregnant, the whole tribe adopts the baby because the father is unknown.

In the Himalayas, there is a culture that involves having one wife for a group of brothers. Due to the high poverty rate and low amounts of land for agriculture, wives generally give birth to multiple children to help work on the farm and make money. When the sons get older, a single wife is found for the group of brothers and is shared among them, that way the fathers land does not have to be split between his many sons. The wife has to then make a sexual schedule so that each man can have his time with her to avoid any jealousy or feelings of negligence.

In Papua New Guinea, children begin having sex as young as age 6. Girls usually begin sexual activities between ages 6-8 whereas the boys generally start between 10-12. It is accepted and encouraged to begin having sexual intercourse at a young age. There are also no stigmas against having premarital sex, as it is commonly practiced within the culture.

Conclusion

In your sex life, you need to enter into a relationship with an open mind because every single person on earth has experiences that will shape the way that they respond in bed. A man who has performance issues will need a woman who helps him to boost his performance and feel good about himself. A woman who has issues about how good she is at sex will need helping along the way too. Bear in mind, it’s not about you. It’s about their past experience and what shaped their views on sex.

One couple that came for help were a couple that had waited until marriage because she had decided that she wanted to be pure when she married. He loved her and had sexual experience but since they had been together, neither one of them had approached the subject of sex. What they found was that they were so accustomed to a non-sexual relationship that they found it hard to make the transition. Her expectations of him were what held him back because he didn’t know if he could live up to them. His expectations of her were what held her back as she knew he had slept with others and thought that he would compare.

Having visited a specialist in sexual matters, they decided to take the whole experience slowly, to discuss and to explore each other and to start to understand that sex between them was a new experience. There was no comparison to be made and she certainly should have no expectations, but should take one step at a time, discovering each other. Because both had that passion for each other, they went along with the advice and they even bought magazines and porn videos to help relax them into a situation where nakedness was natural between them and they were able to overcome all the difficulties together.

It doesn’t matter what caused difficulties. Dialog and love can help you to overcome them. The problem that mankind has is that sex isn’t something that you talk about openly in public and that makes it harder for couples to understand how to broach the subject in bed. Think of the bedroom as being a totally different arena where you can drop all of your inhibitions and discuss everything and when you do, you open up avenues for finding out what makes each other tick. Passionate kisses, learning about each other’s bodies and enjoying your time together is vital to the sexual experience. Feel the passion and don’t be afraid of it, but always respect your partner.

In this book we have covered all kinds of topics that should help you with your love life. The male point of view is different from the female point of view although the variations exist because sometimes women are more dominant or men are not afraid of their feminine side. Whatever your situation, you have to gage how to approach sex to suit your partner’s mentality and to open up your understanding of each other. If you don’t know how to react to something, step back from it and think about it, but don’t leave it as a doubt in your mind. For example, if you are afraid of oral sex, tell your partner and he will be gentler with you. If you think that your male partner is too violent, slow him down and let him know you need a certain amount of gentleness. Never sleep on an argument but don’t think that making up has to involve sex. It does sometimes and this can come as a bonus, but before you can get to a stage where that’s what both of you want, you need to be open with each other.

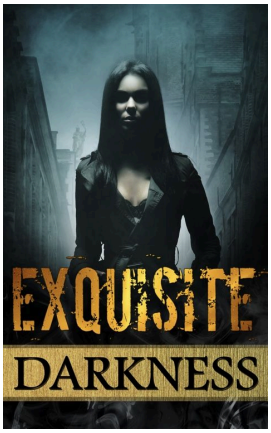

Communicate with one another about what the other one likes and dislikes. Tell each other about your fantasies and what it takes to drive them crazy. Touch one another and tell each other how attracted you are to them, boosting each other’s self-esteem can have amazingly positive effects on your sex life. One of the most important things you can do in a relationship is communicate with one another. Without communicating, you can’t expect to learn anything about each other.

Enjoy your nakedness together. Explore each other's bodies and find out all of those sensitive areas. Be aware of what your partner sees as a turn-off as well and comparing notes in the early days of your relationship will help you to clear up any misconceptions you may have that may stunt your love life. The best way forward is to respect each other and never to criticize the way that making love happens. Simply let it evolve and if it doesn't, give it a little help. Between the two of you, you have the opportunity to make the passion continue and that's what great lovemaking is all about.
